

6 WATER PUMP ACCESSORIES YOU MUST HAVE

Lets you manually control the rate and/or direction of flow of water. Control valve can also be used to improve the efficiency of a pump.

CONTROL VALVE

Automatically controls the on-off cycle of a pump based on preset parameters.

AUTOMATIC WATER FLOW CONTROLLER

Displays real time water pressure in a system. A Pressure gauge is essential for a system with high water pressure.

WATER PRESSURE GAUGE

Prevents water from flowing back into the sump basin. It can be used in several situations including low pressure.

CHECK VALVE

A flow switch is a device that monitors the flow of water. It can send a "trip signal" to a pump to automatically turn it off or on based on the rate of water flow.

FLOW SWITCH

Protects the system by keeping harmful contaminants out. It's essential if the water is highly saline or murky.
