1. Applications

The CM and CME pumps are designed to cover a wide variety of applications, ranging from small domestic installations to large industrial systems. The pumps are suitable for a wide variety of pumping systems where the performance and material of the pump must meet specific demands.

Some of the most typical applications are:

- washing and cleaning
- water treatment
- temperature control
- pressure boosting.

Washing and cleaning

TM05 4756 4508

Fig. 1 Washing and cleaning

CM and CME pumps can be used in washing and cleaning applications, which usually involve pumping of water containing soap or other cleaning agents.

Reference applications

Typical washing and cleaning applications:

- degreasing and washing of production equipment in industrial environments (such as the food and beverage industry)
- washing machines
- vehicle-washing tunnels
- mobile-washing units
- units for CIP (Cleaning In Place).

Water treatment

TM05 4757 4508

Fig. 2 Water treatment

In water treatment plants, the water undergoes a process which makes it more suited for its end use. In this process, the CM and CME pumps can be utilized either as feed pumps or as booster pumps.

Reference applications

Typical water treatment applications:

- nano-, micro- and ultra-filtration systems
- softening, ionizing, demineralizing systems
- desalination systems
- distillation systems
- separators
- swimming pools.

Temperature control

TM05 4758 1809

Fig. 3 Temperature control

Temperature control involves applications where the CM and CME pumps circulate a liquid in a closed loop consisting of a heating or cooling element for optimizing a process by means of temperature. Temperature control is also chilling of equipment or food and beverage in the food production industry.

Reference applications

The CM and CME pumps can for example be used in temperature control systems such as:

- electronic data processing
- laser equipment
- medical equipment
- industrial refrigeration
- heating and cooling in industrial processes
- moisturizing and humidifying.

To ensure safe and reliable operation in applications involving temperature control, we offer CM and CME pumps designed to meet your needs!

We provide solutions for applications involving pumping of these liquids:

- liquids at temperatures down to $-4\text{ }^{\circ}\text{F}$ ($-20\text{ }^{\circ}\text{C}$)
- high-temperature liquids
- high-viscous liquids, etc.

Pumping of liquids at temperatures down to $-4\text{ }^{\circ}\text{F}$ ($-20\text{ }^{\circ}\text{C}$)*

All CM(E) -A, -I, -G pumps are capable of pumping liquids at temperatures down to $-4\text{ }^{\circ}\text{F}$ ($-20\text{ }^{\circ}\text{C}$).

CM(E) -I, -G pumps capable of pumping liquids down to $-22\text{ }^{\circ}\text{F}$ ($-30\text{ }^{\circ}\text{C}$) are available on request.

At such low temperatures, the selection of wrong materials and dimensions may cause deformation because of thermal expansion, and eventually stoppage of operation.

Pumping of high-temperature liquids

The pumping of hot liquids such as water-based liquids up to $+248\text{ }^{\circ}\text{F}$ ($+120\text{ }^{\circ}\text{C}$) demands much of the pump parts, such as shaft seals and rubber parts.

Pumping of highly viscous liquids

In applications where highly viscous liquids are pumped, the motor of the pump can be overloaded, and the pump performance will be reduced.

The viscosity of a pumped liquid depends strongly on the pumped liquid and its temperature.

To meet the above-mentioned requirements, we offer CM and CME pumps with oversize motors.

Pressure boosting

TM05 4759 4508

Fig. 4 Pressure boosting

In pressure-boosting applications, the pumped liquid must be delivered at a desired pressure on demand. The main priorities in pressure-boosting applications are to ensure maximum reliability and user comfort. The CM and CME pumps are ideal for such applications.

Reference applications

Typical pressure-boosting applications:

- pressure boosting and transfer of drinking water
- process-water systems.

Other applications

Besides the applications mentioned above, the CM and CME pumps can be used in many other applications.

Examples:

- distilling systems
- dosing / mixing
- evaporation
- OEM machinery
- chemical industry
- pharmaceutical industry.

2. Product introduction

Introduction

The Grundfos CM and CME pumps are non-self-priming, horizontal, multistage, end-suction centrifugal pumps. The pumps are of the close-coupled type. CM pumps are fitted with mains-operated motors whereas the motor for CME pumps has an integrated variable frequency drive. Both CM and CME pumps have mechanical shaft seals.

The CM and CME pumps are available in these three material versions:

- Cast iron (ASTM A48 CL30 / EN-GJL-200)*
- Stainless steel (AISI 304 / EN 1.4301)
- Stainless steel (AISI 316 / EN 1.4401).

* The impeller, chamber and filling plugs are made of stainless steel (AISI 304 / EN 1.4301).
The pump shaft is made of stainless steel (AISI 431 / EN 1.4057).

CM

Fig. 1 Grundfos CM pumps

The CM pumps are unique products that have been developed in order to fulfill a wide variety of customer demands. The development of the pumps has resulted in no less than five patent applications.

The CM pumps are available in various sizes and numbers of stages to provide the flow and pressure required.

The CM pumps consist of two main components: the motor and the pump unit.

The motor is a Grundfos motor.

The pump unit incorporates optimized hydraulics and offers various types of connections.

The pumps offer many advantages; see also [Features and benefits](#) on page 7:

- compact design
- worldwide usage
- high reliability
- service-friendly
- wide performance range
- low noise
- customized solutions.

CME

Fig. 2 Grundfos CME pumps

The CME pumps are built on the basis of CM pumps.

CME pumps belong to the so-called E-pump family.

The difference between the CM and the CME pump ranges is the motor.

The CME pump motor is a Grundfos MLE motor. The motor incorporates a variable frequency drive (VFD).

Frequency control enables continuously variable control of the motor speed, which makes it possible to set the pump to operation at any duty point. The aim of continuously variable control of the motor speed is to adjust the performance to a given requirement.

It is possible to connect a sensor to the built-in variable frequency drive on CME pumps. For further information about CME pumps, see [Communication with CME pumps](#) on page 21.

The pump materials are identical to those of the CM pump range.

Selecting a CME pump

Select a CME pump if the following features are required:

- Controlled operation, i.e. consumption fluctuates
- constant pressure, flow, or temperature
- communication with the pump.

Adaptation of performance through frequency-controlled speed offers obvious benefits such as:

- Energy savings
- increased comfort
- control and monitoring of the application and pump performance.

For further information about CME pumps, see [Communication with CME pumps](#) on page 21.

CME Plus

CME Plus pumps are built on the basis of CME pumps. In addition to the features of a standard CME, the CME Plus includes a pressure sensor, expansion tank, and discharge piping making it a complete package ready for constant pressure applications.

The CME Plus incorporates a stop function ensuring that the pump automatically stops if the water demand drops to a very low level or disappears altogether. The method gives good total operating economy irrespective of the water demand, and the pump is not subjected to overheating and the subsequent risk of damage to the shaft seal.

Features and benefits

Fig. 3 CM and CME pumps

CM and CME pumps present the following features and benefits:

Compact design

Pump and motor are integrated in a compact and user-friendly design. The pump is fitted to a low-profile base plate, making it ideal for installation in systems where a compact pump is required.

Modular construction/customized solutions

The modular construction of the CM and CME pumps makes it easy to create many different variants based on standard factory parts. This means that it is possible to create pump variants that are customized for the application in question.

Worldwide usage

- With different voltage and frequency combinations, the CM and CME product ranges cover markets worldwide.
- Various certificates covering worldwide usage are available. Contact Grundfos for details.

High reliability

- New state-of-the-art shaft seal design and materials offering these benefits:
 - high wear resistance and long operating life
 - improved sticking and dry-running capabilities.
- The pumps are less sensitive to impurities in the pumped liquid than similar pumps of the canned-rotor type.

Easy installation and service friendly

- An installation indicator is fitted on three-phase pumps, which makes it easy to see if the electrical connection of the motor is correct. Based on the motor cooling air, it indicates the direction of rotation of the motor.
- No special service tools required.
- Kits in stock for quick delivery.
- All parts available as kits, single parts or in bulk.
- Service instructions and video make it simple to disassemble and assemble the pump.
- Service kit instructions available where deemed necessary.

Fig. 4 Indicator for motor rotation shows black if rotation is correct; white if rotation is incorrect

Wide performance range

- Can be used in a wide range of applications:
 - washing and cleaning
 - water treatment
 - temperature control
 - pressure boosting
 - chemical industry
 - pharmaceutical industry
 - etc.
- Product range in WinCAPS and WebCAPS.
See section [17. Further product documentation](#) on page [85](#).

Low noise level

The CM and CME pumps offer very quiet operation.

High-performance hydraulics

Pump efficiency is maximized by the optimized hydraulics and carefully crafted production technology.

Electrocoated cast-iron parts

- Optimized corrosion resistance
- Better efficiency because of smooth surfaces.

Customized solutions

It is possible to create many different variants of the CM and CME pumps. For further information, see section [14. Customization](#) on page [74](#).

- Motor adaptation
- Pump body modifications.

Motors

Grundfos motors are remarkably quiet and highly efficient.

Grundfos motors are available with integrated variable frequency drive designed for speed-controlled operation.

3. Performance range

6. Construction

Pump

The CM and CME pumps are non-self-priming, horizontal, multistage centrifugal pumps. The pumps have an axial suction port and a radial discharge port and are mounted on a base plate.

All movable parts are made of stainless steel.

The pumps are available with mains-operated motors (CM pumps) and with variable frequency drive motors (CME pumps).

All pumps incorporate a maintenance-free mechanical O-ring shaft seal with fixed driver.

Cast-iron versions

Stainless-steel versions

Fig. 5 CM and CME pumps

Motor

CM and CME pumps are fitted with totally enclosed, fan-cooled, 2-pole motors.

CM pumps up to and including 2 Hp are available with single-phase motors as standard. CME pumps up to and including 1.5 Hp are available with single-phase motors as standard. CM and CME pumps from 2 to 10 Hp are fitted with three-phase motors.

***Premium efficient (IE3) available on request

Motor protection

Mains-operated motors (CM)

Single-phase motors, 1 x 115/230 V, 60 Hz, do not incorporate motor protection and must be connected to a motor-protective circuit breaker which can be manually reset. Set the motor-protective circuit breaker according to the rated current of the motor ($I_{1/1}$). See nameplate.

Other single-phase motors have built-in current- and temperature-dependent motor protection in accordance with IEC 60034-11 and require no further motor protection. The motor protection is of the TP 211 type, which reacts to both slow- and quick-rising temperatures. The motor protection is automatically reset.

Three-phase motors up to 5 hp must be connected to a motor-protective circuit breaker which can be manually reset. Set the motor-protective circuit breaker according to the rated current of the motor ($I_{1/1}$). See nameplate.

TM04 3509 4508 - TM04 3511 4508 - TM04 3508 4508 - TM04 3510 4508

Electronically speed-controlled motors (CME)

CME pumps require no external motor protection. The MLE motor incorporates thermal protection against slow overloading and blocking (IEC 34-11: TP 211).

Variable frequency drive (VFD) operation

All three-phase motors can be connected to a variable frequency drive. Depending on the type of variable frequency drive, this may cause increased acoustic noise from the motor. Furthermore, it may cause the motor to be exposed to detrimental voltage peaks.

As standard ML 71- and ML 80-based motors have no phase insulation and must therefore be protected against voltage peaks higher than 650 V (peak value) between the supply terminals.

Note: ML 71- and ML 80-based motors with phase insulation are available on request.

The above disturbances, i.e. both increased acoustic noise and detrimental voltage peaks, can be eliminated by fitting an LC filter between the variable frequency drive and the motor.

For further information, please contact the variable frequency drive supplier or Grundfos.

Shaft seal

The shaft seal for the CM and CME pumps is of the O-ring type, which makes it very flexible when different types of O-rings and seal-face materials are needed. The shaft seal has a fixed seal driver which ensures a reliable rotation of all parts – even under the most extreme operating conditions.

Due to the special design of the shaft seal and the interfaces to the rest of the pump construction, the dry-running capabilities are improved significantly compared to most other similar shaft seals and pump types. Furthermore, improvements have been made to reduce the risk and effect of sticking. The shaft seal types available can be found in [Selection of shaft seal](#) on page 26 where the key parameters of selecting a shaft seal are also described.

Fig. 6 Exploded view of shaft seal

Note: The available shaft seals for CM and CME pumps are very robust and durable, but dry running must always be avoided.

Details regarding operating conditions for the shaft seal can be found in [Operating range of the shaft seal](#) on page 20.

Further information about the shaft seal can be found in separate documentation covering shaft seals which can be downloaded from WebCAPS. See [17. Further product documentation](#) on page 85.

7. Operating conditions

Ambient temperature and altitude

Maximum ambient temperature in relation to liquid temperature

The maximum ambient temperature depends on the liquid temperature as shown in the table below.

Max. ambient temperature [F° (°C)]	Liquid temperature [F° (°C)]
+131 (+55) ¹⁾	+194 (+90)
+122 (+50) ¹⁾	+212 (+100) ²⁾
+113 (+45) ¹⁾	+230 (+110) ²⁾
+104 (+40)	+248 (+120) ²⁾

- ¹⁾ The maximum ambient temperature for CME pumps is +104 °F (+40 °C), irrespective of the liquid temperature.
²⁾ Note that the maximum permissible liquid temperature for CM-A and CME-A is +194 °F (+90 °C).

Storage and transport temperature

−40 °F (−40 °C) to +140 °F (+60 °C).

Derating of motor output (P₂) in relation to ambient temperature and altitude above sea level

If the ambient temperature exceeds +104 °F (+40 °C) for CME pumps or +131 °F (+55 °C) for CM pumps, or if the motor is installed more than 3280 ft (1000 meters) above sea level, the motor output (P₂) decreases due to the low density and consequently low cooling effect of the air. In such cases, it may be necessary to use an oversize motor with higher rated output.

Figure 9 shows the relationship between motor output (P₂) and ambient temperature or motor output (P₂) and altitude. The x-axis showing the temperature corresponds to an altitude of 3280 ft (1000 meters) above sea level. The x-axis showing the altitude corresponds to an ambient temperature of +104 °F (+40 °C).

Fig. 9 Relationship between motor output (P₂) and temperature or motor output (P₂) and altitude

Temperatures and pressures

Maximum operating pressure and permissible liquid temperature

The maximum operating pressure and the permissible liquid temperature depend on the pump material, the type of shaft seal and the pumped liquid.

Material variant	Shaft seal	Permissible liquid temperature ¹⁾ [F° (°C)]	Maximum operating pressure [psi (bar)]
Cast iron (A48 CL30 / EN-GJL-200)	AVBx	−4 to +104 (−20 to +40)	145 (10)
	AQQx	+105 to +194 (+41 to +90)	87 (6)
Stainless steel (AISI 304 / EN 1.4301)	AVBx	−4 to +194 (−20 to +90)	145 (10)
	AQQx	+4 to +104 (−20 to +40)	87 (6)
Stainless steel (AISI 316 / EN 1.4401)	AVBx	+105 to +194 (+41 to +90)	87 (6)
	AQQx	−4 to +104 (−20 to +40)	232 (16)
Stainless steel (AISI 316 / EN 1.4401)	AVBx	+195 to +248 (+91 to +120) ²⁾	145 (10)
	AQQx	−4 to +194 (−20 to +90) ³⁾	232 (16)
Stainless steel (AISI 316 / EN 1.4401)	AVBx	+195 to +248 (+91 to +120) ²⁾	145 (10)
	AQQx	−4 to +104 (−20 to +40)	87 (6)

- ¹⁾ At liquid temperatures below 32 °F (0 °C), higher motor outputs may be needed due to increased viscosity, for instance if glycol has been added to the water.
²⁾ 248 °F (120 °C) applies only if the pump has an AQQE shaft seal.
³⁾ CM-I, -G and CME-I, -G pumps for liquid temperatures below −4 °F (−20 °C) are available on request. Please contact Grundfos.

Liquid temperature range

O-ring material / liquid	Permissible liquid temperature [F° (°C)]
EPDM	−4 to +248 (−20 to +120)
FFKM	−4 to +248 (−20 to +120)
FKM / liquids containing water	−4 to +194 (−20 to +90)
FKM / oil without water	+32 to +248 (0 to +120)

Maximum inlet pressure

The maximum inlet pressure of the CM pumps is equal to the maximum operating pressure of the pump minus the pumps discharge pressure against a closed valve.

For example:

CM5-3 A-S-A-E-AQQE

Max. operating pressure: 145 psi

Discharge pressure against closed valve: 57 psi

Max. inlet pressure=145-57=88 psi

Minimum inlet pressure

NPSH

Calculation of the inlet pressure "H" is recommended in these situations:

- The liquid temperature is high.
- The flow is significantly higher than the rated flow.
- Water is drawn from depths.
- Water is drawn through long pipes.
- Inlet conditions are poor.

To avoid cavitation, make sure that there is a minimum pressure on the suction side of the pump. The maximum suction lift "H" in feet of head can be calculated as follows:

$$H = p_b - \text{NPSH} - H_f - H_v - H_s$$

p_b = Barometric pressure in feet absolute.
(Barometric pressure can be set to 33.9).
In closed systems, p_b indicates the system pressure in feet.

NPSH = Net Positive Suction Head in feet of head.
(To be read from the NPSH curve at the highest flow the pump will be delivering).

H_f = Friction loss in suction pipe in feet of head.
(At the highest flow the pump will be delivering).

H_v = Vapour pressure in feet of head.
(To be read from the vapor pressure scale.
" H_v " depends on the liquid temperature " T_m ").

H_s = Safety margin = minimum 2 ft of head.

If the "H" calculated is positive, the pump can operate at a suction lift of maximum "H" feet of head.

If the "H" calculated is negative, an inlet pressure of minimum "H" feet of head is required.

Fig. 10 Minimum inlet pressure (NPSH)

Note: To avoid cavitation, **never** select a pump with a duty point too far to the right on the NPSH curve.

Always check the NPSH value of the pump at the highest possible flow.

Fig. 11 Vapor pressure chart

TM04 3487 4508

TM02 7729 3903

Sound pressure

The sound pressure values in the table below apply for CM pumps. If the motor output (P_2) for a given CM pump is not found in the table, use the nearest rounded-up value. The values for sound pressure include a tolerance of 3 dB[A] according to EN ISO 4871.

P_2 [hp]	60 Hz	50 Hz
	\bar{L}_{pA} [dB(A)]	\bar{L}_{pA} [dB(A)]
.5	55	50
.75	53	50
1	54	50
1.5	57	52
2	59	54
3	59	54
4	60	55
5.4	66	62
7.4	65	60

The audible noise from CM pumps is primarily noise from the motor fan. The selection of CME pumps will reduce the noise at partial load, as the motor, and consequently, the motor fan runs at a lower speed. Possible flow noise from control valves is also reduced at partial load in the case of the CME pump. Sound pressure values are measured at 3 ft.

Operation in condensing environments

If the liquid temperature becomes lower than the ambient temperature, condensation may form in the motor during inactivity. In such cases a motor suited for condensing environments must be used.

When installing CM and CME pumps outdoors, provide them with a suitable cover to protect them from build-up of water condensation. See fig. 12.

TM04 5799 4009

Fig. 12 CME pump with protective cover

Motors in outdoor installations radiate heat to and absorb heat from their surroundings. By day, a stopped motor will absorb more heat than it radiates; by night, especially clear nights, radiation from a stopped motor may be so high that the surface temperature falls a few degrees below the air temperature. This may cause the formation of condensation. Condensation on the inner surfaces may result in moisture on the electronic components, including the printed-circuit boards, which means a risk of failure or even destruction of the motor and electronics.

Furthermore, the cover protects the motor against direct sunlight.

Environmental rating

Three-phase MGE/MLE motors hold a UL NEMA 3R environmental rating.

Single-phase MGE/MLE motors have not been tested against the UL NEMA environmental rating.

All motors are IP55.

When the rubber plug is removed the rating becomes IP34. This applies to both CM and CME pumps. The use of a cover does not affect the IP rating.

Operating range of the shaft seal

The operating range of the shaft seal depends on operating pressure, type of shaft seal and liquid temperature.

The curve in fig. 13 shows which shaft seals are suitable at a given temperature and a given pressure.

The curve applies to clean water.

Fig. 13 Curve for the selection of shaft seals

* Antifreeze should be added at liquid temperatures below +32 °F (0 °C).

** CM and CME pumps for liquid temperatures below -4 °F (-20 °C) are available on request. Please contact Grundfos.

*** AQQV above 194 °F (+90 °C) only in media not containing water.

Viscosity

The pumping of liquids with densities or kinematic viscosities higher than those of water will cause a considerable pressure drop, a drop in the hydraulic performance and a rise in the power consumption.

For instance at liquid temperatures below +32 °F (0 °C), higher motor outputs may be needed due to increased viscosity if glycol has been added to the water.

In such situations, the pump should be fitted with a larger motor. If in doubt, contact Grundfos or visit WebCAPS. See page 85.

Installation of pump

The pump must be installed on a plane surface and fixed so that it cannot be displaced during start-up and operation.

The pump must be installed so that air locks are avoided in the pump housing and pipework; fig. 14 shows the permissible pump positions.

Fig. 14 Permissible pump positions

The pump should be installed with easy access for inspection, maintenance and service.

The pump should be installed in a well-ventilated location.

Frequency of starts and stops

Maximum of 100 per hour.

TM03 8773 3409

8. CME pumps

Communication with CME pumps

Communication with CME pumps is possible by means of:

- a central building management system
- a remote control (Grundfos R100)
- a control panel.

Central building management system

The operator can communicate with a CME pump at a distance. Communication can take place via a central building management system allowing the operator to monitor and change control modes and setpoint settings.

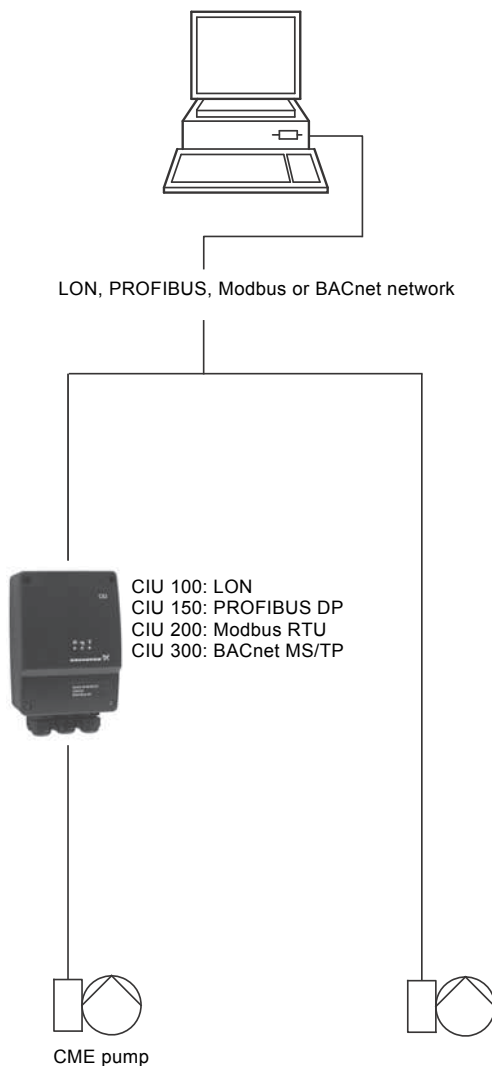

Fig. 15 Diagram of building management system

TM04 5022 2409

Remote control

The Grundfos R100 remote control and Grundfos GO Remote are available as an accessory. See the section 16. Accessories on page 80.

The operator can communicate with the CME pump by pointing the IR-signal transmitter at the control panel of the terminal box. Furthermore the newest generation of CME pumps can communicate with the Grundfos GO Remote via radio communication.

TM03 0141 4104

Fig. 16 R100 remote control

TM05 5383 4312

Fig. 17 Grundfos GO Remote

Pos.	Description
1	Grundfos MI 201: Consists of an Apple iPod touch 4G and a Grundfos cover.
2	Grundfos MI 202: Add-on module which can be used in conjunction with Apple iPod touch 4, iPhone 4G or later.
3	Grundfos MI 301: Separate module enabling radio or infrared communication. The module can be used in conjunction with an Android or iOS-based Smartphone with Bluetooth connection.

The operator can monitor and change control modes and settings of the CME pump with the R100 or Grundfos GO Remote.

Control panel

The operator can change the setpoint settings manually on the control panel of the CME pump terminal box.

TM00 7600 0404

Fig. 18 Control panel of a CME pump

Speed control of CME pumps

Affinity equations

Normally, CME pumps are used in applications characterized by a variable flow. Consequently, it is not possible to select a pump that is constantly operating at its optimum efficiency.

In order to achieve optimum operating economy, the duty point should be close to the optimum efficiency (η) for most operating hours.

Between the min. and max. performance curves, CME pumps have an infinite number of performance curves, each representing a specific speed. It may therefore not be possible to select a duty point close to the max. curve.

TM01 49/16 4803

Fig. 19 Min. and max. performance curves

In situations where it is not possible to select a duty point close to the max. curve, use the affinity equations below. The head (H), the flow rate (Q) and the input power (P) are the appropriate variables for calculating the motor speed (n).

Note: The approximated formulas apply on condition that the system characteristic remains unchanged for n_n and n_x and that it is based on the formula $H = k \times Q^2$ where k is a constant.

The power equation implies that the pump efficiency is unchanged at the two speeds. In practice, this is not quite correct.

Finally, it is worth noting that the efficiency of the variable frequency drive and the motor must be taken into account if a precise calculation of the power saving resulting from a reduction of the pump speed is wanted.

TM00 8720 3496

Fig. 20 Affinity equations

Legend

H_n	Rated head
H_x	Current head
Q_n	Rated flow rate
Q_x	Current flow rate
n_n	Rated motor speed
n_x	Current motor speed
η_n	Rated efficiency
η_x	Current efficiency

WinCAPS and WebCAPS

WinCAPS and WebCAPS are selection programs offered by Grundfos.

The two programs make it possible to calculate the specific duty point and energy consumption of a CME pump.

When you enter the dimensions of the pump, WinCAPS and WebCAPS can calculate the exact duty point and energy consumption. For further information, see page 85.

CM connected to Grundfos CUE external variable frequency drive

GrA 4404

Fig. 21 Grundfos CUE product range

Grundfos CUE is a complete range of external variable frequency drives (VFDs) for pump control in a wide range of applications. Grundfos CUE is designed for wall mounting.

Grundfos CUE provides a variety of benefits to the end-user.

The benefits include:

- Grundfos CME pump functionality and user interface
- application and pump family-related functions
- increased comfort compared to mains-operated pump solutions
- simple installation and commissioning compared to standard VFDs.

Functions

Intuitive start-up guide

The start-up guide enables easy installation and commissioning as well as plug-and-pump convenience. Few settings need to be made by the installer as the rest is done automatically or preset from the factory.

Smart user interface

TM04 3283 4108

Fig. 22 Grundfos CUE control panel

Grundfos CUE features a unique user-friendly control panel with graphic display and easy-to-use buttons. Panel layout resembles the well-known Grundfos R100 remote control, which is used with Grundfos CME pumps.

Controlling the value you choose

Grundfos CUE has a built-in PI controller offering closed-loop control of a desired value.

The values include:

- constant differential-pressure
- proportional pressure
- constant temperature
- constant flow.

Wide product range

The CUE product range is quite comprehensive, covering five different voltage ranges, enclosure classes IP20/21 (Nema 1) and IP54/55 (Nema 12), and a wide range of output powers.

The table below provides a general overview.

Input voltage [V]	Output voltage [V]	Motor [hp]
1 x 200-240	3 x 200-240	1.5 - 10
3 x 200-240	3 x 200-240	1 - 60
3 x 380-500	3 x 380-500	.75 - 300
3 x 525-600	3 x 525-600	1 - 10

9. Selection and sizing

Selection of pumps

Selection of pumps should be based on these elements:

- the duty point of the pump (see fig. 23)
- dimensional data such as pressure loss as a result of height differences, friction loss in the pipework, pump efficiency, etc. (see fig. 24)
- pump materials (see 6. *Construction* on page 12)
- pump connections (see page 25)
- shaft seal (see page 26).

Duty point of the pump

From a duty point it is possible to select a pump on the basis of the curve charts starting on page 28.

Fig. 23 Example of a curve chart

Dimensional data

When sizing a pump, take the following factors into account:

- Required flow and pressure at the draw-off point.
 - Pressure loss as a result of height differences (H_{geo}).
 - Friction loss in the pipework (H_f).
- It may be necessary to account for pressure loss in connection with long pipes, bends or valves, etc.
- Best efficiency at the estimated duty point.*
 - NPSH value.

For calculation of the NPSH value, see *Minimum inlet pressure* on page 18.

* See *Selection of CME pumps* on page 26 for further information about sizing CME pumps.

Fig. 24 Dimensional data

Pump efficiency

When sizing the pump, the efficiency (η) should be considered so that the pump will operate at or near its maximum efficiency, for instance on the right-hand side in the curve example in fig. 25.

Fig. 25 Best efficiency

Before determining the best efficiency point, the operation pattern of the pump needs to be identified. If the pump is expected to operate at the same duty point, then select a CM pump which is operating at a duty point corresponding with the best efficiency of the pump. The example in fig. 26 shows how to check the pump efficiency when selecting a CM pump.

TM04 3486 4508

TM04 5899 3610

TM00 9190 1303

Fig. 26 Example of a CM pump's duty point

Pump materials

Select the material variant on the basis of the liquid to be pumped. The table below gives a general recommendation regarding selection of pump material.

Liquid to be pumped	Material in contact with pump media	Pump type
Clean, non-aggressive liquids such as potable water and oils	Cast iron* (A48 CL30 / EN-GJL-200)	CM(E)-A
Industrial liquids and acids	Stainless steel (AISI 304 / EN 1.4301)	CM(E)-I
	Stainless steel (AISI 316 / EN 1.4401)	CM(E)-G

* The impeller, chamber and filling plugs are made of stainless steel (EN 1.4301/AISI 304).
The pump shaft is made of stainless steel (EN 1.4057/AISI 431).

For more specific selection based on the pumped liquid, see [15. Pumped liquids](#) on page 77, or contact Grundfos.

Pump connections

Fig. 27 Examples of pump connections

Selection of pump connection depends on the rated pressure and pipework. To meet any requirement, the CM and CME pumps offer a wide range of flexible connections such as:

- internal NPT thread
- Whitworth thread Rp
- DIN flange
- Tri-Clamp®
- ANSI flange
- JIS flange
- PJE coupling.

CM and CME pumps come standard with NPT fittings (see dimensions on pages 40 to 64).

TM04 3937 0409

TM04 5899 3610

Selection of shaft seal

As standard, the CM and CME pumps are fitted with a Grundfos O-ring type shaft seal with fixed driver suitable for the most common applications.

TM04 3934 0409

Fig. 28 Shaft seal (O-ring type with fixed driver)

The table below shows the available shaft seal types for CM and CME pumps.

Pump type	Shaft seal type	Material	Rubber parts
CM, CME	AQQE	Stainless steel	EPDM (E) FKM (V) FFKM (K)
	AQQV		
	AQQK		
	AVBE		
	AVBV		

These key parameters must be taken into account when selecting the shaft seal:

- type of pumped liquid
- liquid temperature
- maximum pressure.

Use fig. 13 on page 20 to select a suitable shaft seal. If the pumped liquid differs from water, a suitable shaft seal can be found in section 15. *Pumped liquids* on page 77.

Note: The list should be applied with some caution, as factors such as concentration of the pumped liquid, liquid temperature or pressure may affect the chemical resistance of a specific pump version.

Selection of CME pumps

CME pumps are normally used in applications characterized by a variable flow. Consequently, it is not possible to select a pump that is constantly operating at its optimum efficiency. In order to achieve optimum operating economy, the duty point should therefore be close to the optimum efficiency (eff) for most operating hours. For further information see section 8. *CME pumps* on page 21.

Note: Irrespective of the input frequency, the 100 % speed of CME pumps is approximately 3400 min^{-1} , corresponding to an input frequency of 60 Hz, i.e. if the input frequency is 50 Hz, the 100 % speed will still be approximately 3400 min^{-1} . See CME performance curves on pages 34 to 39.

10. How to read the curve charts

TM04 5899 3610

Fig. 29 How to read the curve charts

Guidelines to performance curves

The guidelines below apply to the curves shown on the following pages:

- Tolerances to ISO 9906, Annex A, if indicated.
- The motors used for the measurements are the specifically designed motors for CM and CME pumps. The motors are based on Grundfos standard motors (ML or MLE).
- Measurements have been made with airless water at a temperature of +68 °F (+20 °C).
- The curves apply to the following kinematic viscosity: $\nu = 1 \text{ cSt} (1 \text{ mm}^2/\text{s})$.
- The QH curves apply to rated motor speeds of approximately $3400 \text{ min}^{-1} (60 \text{ Hz})$. All curves are based on current motor speeds. The QH curves apply to a fixed speed of 3480 rpm for CM pumps. CME QH curves apply to a fixed speed of 3480 rpm. **Note:** Please refer to WebCAPS for more precise curves. In WebCAPS, it is also possible to adjust the curves depending on the density and viscosity.
- When the motor is running at the lowest or highest rated voltage, the pump performance will usually vary by $\pm 2 - 4 \text{ ft}$ at a given duty point.

- All curves are based on pumps fitted with a three-phase motor.
- CM pumps using single phase or three phase motors may differ in performance. For curves corresponding to specific motors please refer to WebCAPS.
- Due to the risk of overheating, the pumps should not be used at a flow below the minimum flow rate. The curve in fig. 30 shows the minimum flow rate as a percentage of the rated flow rate in relation to the liquid temperature.

Signal output	Potential-free changeover contact. Maximum contact load: 250 VAC, 2 A. Minimum contact load: 5 VDC, 10 mA. Screened cable: 0.5 - 2.5 mm ² . Maximum cable length: 1650 ft (500 m).	
Bus input	Grundfos bus protocol, GENIbus protocol, RS-485. 0.5 - 1.5 mm ² screened 2-core cable. Maximum cable length: 1650 ft (500 m).	
EMC	EN 61800-3 Note: When pumps fitted with 10 hp motors are installed in first environment (residential areas), an additional EMC filter is required to obtain class B, group 1 status. Motors of 0.75 to 1.5 hp: Electromagnetic disturbance – first environment (residential areas) – unrestricted distribution, corresponding to CISPR 11, class B, group 1. Motors of 10 hp: Electromagnetic disturbance – first environment (residential areas) – restricted distribution. Immunity to electromagnetic disturbance – second environment (industrial areas) – unrestricted distribution, corresponding to CISPR 11, class A, group 1.	
Enclosure class	TEFC (IP55 (IEC 34-5)).	
Insulation class	F (IEC 85).	
Ambient temperature	During operation: –4 °F to 104 °F (–20 °C to +40 °C). During storage/transport: –40 °F to 140 °F (–40 °C to +60 °C).	
Relative air humidity	Maximum 95 %.	

* Cross section min. 0.5 mm² and max. 1.5 mm².

14. Customization

Although the Grundfos CM and CME product range offers a number of pumps for different applications, customers require specific pump solutions to satisfy their needs. Below are the options available for customizing the CM and CME pumps. Contact Grundfos for further information or for requests other than the ones mentioned below.

Motors

Motor with thermal protection	Grundfos offers motors with bimetallic thermal switches or temperature-controlled PTC sensors (thermistors) in the motor windings.
Oversize motor	In installations where one of the conditions mentioned below is present, the motor size must be evaluated to make sure there will be no risk of overload. <ul style="list-style-type: none"> • ambient temperatures above +131 °F (+55 °C) • liquid temperatures below +32 °F (0 °C) • installation at altitudes of more than 3300 ft (1000 meters) above sea level • use of glycol or other high-viscous liquids. Alternative motors are available on request. See more information in this section.
Undersize motor	Available on request. See more information in this section.
Terminal box position	Other terminal box positions are possible for CM pumps with MG 71 and MG 80 motors. See more information in this section.
Use of external variable frequency drive	For most three-phase CM pumps, a variable frequency drive (VFD) supplied by either single- or three-phase supply can be used. In many cases where an external VFD is used, it is necessary to protect the motor against voltage peaks higher than 650 V (peak value). Grundfos offers pumps with phase insulation to protect the pump against voltage peaks up to 1000 V (peak values). The supplier of the VFD must be consulted to verify the maximum voltage peaks. Grundfos CUE is a suitable VFD. See page 26.
Harting plug	Harting plugs are available for easier installation and maintenance of pumps.
High-efficiency motors	CM and CME pumps with three-phase motors ranging from 1.5 to 10 hp are available with premium efficient (IE3) motors.
Motor with anti-condensation heater	The heater keeps the motor temperature higher than the ambient temperature and prevents condensation.
Motors with PTC sensors	Built-in PTC sensors (thermistors) protect the motor against rapid as well as slow overheating. PTC sensors must be connected to an external tripping or LiqTec unit connected to the control circuit.
Motors with thermal switches	Built-in thermal switches protect the motor against rapid as well as slow overheating. Thermal switches must be connected to an external control circuit to protect the motor against slow overheating. The thermal switches require no tripping unit.
Low noise motors	Motors have the fans removed. These motors do not have UL approval.

Under- and over-size motors

The available motor sizes are shown in the [13. Motor data](#) section beginning on page 72.

Undersize and oversize motors are defined as the next horsepower size below or above the fitted standard motor.

Note: The CM 1, 3 and 5 cannot be combined with frame sizes 112 and 132.

It is advisable to use an oversize motor if the operating conditions fall outside the standard conditions.

We especially recommend oversize motors in these cases:

- The pump is installed at an altitude of more than 3,280 ft (1000 meters) above sea level.
- The viscosity or density of the pumped liquid is higher than that of water.
- The ambient temperature exceeds +104 °F (+40 °C) (CME).
- The ambient temperature exceeds +131 °F (+55 °C) (CM).

It is advisable to use an undersize motor if the operating conditions do not at all reach the standard conditions.

Undersize motors can be used in these cases:

- The viscosity or density of the pumped liquid is lower than that of water.
- The duty point of the pump is constant, and the flow rate is significantly lower than the recommended maximum flow rate.

The duty point of the pump is constant, and the flow rate is significantly lower than the recommended maximum flow rate.

Terminal box positions

As standard the terminal box is mounted in 12 o'clock position as shown in fig. 31.

CM pumps with motor frame sizes of 71 and 80 are available with other terminal box positions on special request.

Fig. 31 Terminal box positions of frame sizes 71 and 80

TM04 0357 1008

Pumps

Low-temperature pump	<p>As standard, the CM and CME pumps can be exposed to temperatures down to -4 F (-20 °C). If required, CM and CME pumps can be delivered in a special variant for pumping liquids at -22 °F (-30 °C). These pumps have an oversize neck ring ensuring that impellers do not seize up as a result of thermal expansion. Available for CM-I and CM-G versions only. Contact Grundfos.</p>
Aggressive liquids	<p>When it is necessary to pump very aggressive liquids, the pump must be fitted with special rubber parts. It is possible to order the pumps with FKM and FFKM rubber parts.</p>
Alternative connection positions	<p>The CM and CME pumps are available with the discharge port rotated to the 3 o'clock or 9 o'clock position. This is possible on all CM-I and CM-G models and CM-A models with 71 or 80 frame motors. See more information in this section.</p>
Surface treatments	<p>CM pumps are available with several surface treatment options:</p> <ul style="list-style-type: none"> • cleaned and dried pumps • electro-polished pumps • alternative coloring. <p>See more information in this section.</p>

Alternative connection positions

The pump is available with various connection positions on special request. See fig. 32.

Fig. 32 Alternative connection positions

Surface treatments

Cleaned and dried pumps

Cleaned and dried pumps are recommended for use in applications involving strict demands on cleanliness and surface quality, such as low content of silicone. Prior to assembly, all pump parts are cleaned in 140 °F to 158 °F (60 to 70 °C) water with a cleaning agent. All pump parts are then thoroughly rinsed in de-ionized water and air-dried. The pump is assembled without any use of silicone lubricants. Finally, the pump is packed in silicone-free plastic.

Cleaned and dried pumps are not performance-tested.

Electro-polished pumps

Electro-polished pumps are often used in the pharmaceutical industry and in the food and beverage industry where materials and surface quality must meet strict requirements to hygiene or corrosion resistance.

Electro-polishing removes burrs as well as metallic and non-metallic inclusions, providing a smooth, clean and corrosion-resistant stainless-steel surface.

First, all components are pickled in a mixture of nitric and hydrofluoric acid. Subsequently, the components are electro-polished in a mixture of sulphuric and phosphoric acid. Finally, the components are passivated in nitric acid.

All cast parts are polished mechanically before being electro-polished.

To meet the strict hygienic requirements to material and surface quality, we offer electro-polished stainless-steel pumps with the following surface quality:

Surface quality: Ra ≤ 0,8 µm.

Alternative coloring

All pump types and sizes are available with alternative coloring. We offer custom-built pumps in any NCS- or RAL-specified color to suit your requirements!

The paint used is water-based. Painted parts correspond to corrosion class III.

Connections and other variants

Pipe connections	<p>The CM and CME pumps can be ordered with the following pipe connections on request:</p> <ul style="list-style-type: none"> • Tri-Clamp® • DIN flange • ANSI flange • JIS flange • PJE coupling.
------------------	---

A wide range of pipe connections are available for the CM and CME pumps:

- internal NPT thread (standard in North America)
- Whitworth thread Rp
- Tri-Clamp® (accessory)
- ANSI flange (accessory)
- DIN flange (accessory)
- JIS flange (accessory)
- PJE coupling (accessory).

Some of the available pipe connections are shown in fig. 33.

TM04 3937 0409

Fig. 33 Examples of pipe connections

Certificates and nameplates

Certificates	<p>Certificate of compliance with the order</p> <p>Test certificate</p> <p>Inspection certificate</p> <p>Standard test report</p> <p>...and many more.</p>
Extra nameplate	Available on request.
UR-marked motor	<p>If the UL-listed product according to UL778 is not available, a pump with UR-marked motor according to UL1004 can be offered as an alternative.</p>

15. Pumped liquids

CM, CME pumps are designed to move thin, non-explosive liquids, not containing solid particles or fibers. The liquid must not chemically attack the pump materials.

When pumping liquids with a density and/or viscosity higher than those of water, oversized motors must be used, if required.

Whether a pump is suitable for a particular liquid depends on a number of factors of which the most important are the chloride content, pH value, temperature and content of chemicals and oils.

Please note that aggressive liquids (for instance seawater and some acids) may attack or dissolve the protective oxide film of the stainless steel and thus cause corrosion.

List of pumped liquids

A number of typical liquids are listed in the chart.

Other pump versions may be applicable, but those stated in the list are considered to be the best choices.

The table is intended as a general guide only and cannot replace actual testing of the pumped liquids and pump materials under specific working conditions.

The list should, however, be applied with some caution as factors such as concentration of the pumped liquid, liquid temperature or pressure may affect the chemical resistance of a specific pump version.

Safety precautions must be taken when pumping dangerous liquids.

Notes

a	To minimize the risk of corrosion the pump must be running continuously, i.e. standstills must not exceed 6 to 8 hours.
b	May contain additives or impurities which can cause shaft seal problems.
c	The density and viscosity may differ from those of water. Consider this when calculating motor and pump performance.
d	In order to avoid corrosion, the liquid must be free of oxygen. Flammable or combustible liquid. Safety precautions must be considered to ensure safe handling of flammable liquids. Handling the liquid above the flashpoint and/or boiling point will require the greatest restrictions. A sealless pump may be required. Contact Grundfos.
e	Risk of crystallization/precipitation on the shaft seal.
f	Risk of crystallization/precipitation on the shaft seal.
g	If oil residues are present, EPDM cannot be used.

16. Accessories

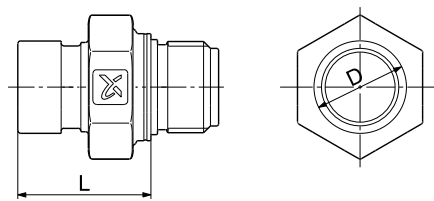

Pipework connections

Distance piece

The distance piece is intended for mounting on the discharge port in order to improve the accessibility when connecting the pump to the piping system. The distance piece is made of brass.

Distance piece	Pump type	Pipework connection	Pump thread	Product number
	CM 1 CM 3 CM 5	1"	NPT	96587201
TM04 5800 4009				

PJE connection adapter sets for CM(E)

TM03 3865 0309					

* Length from outer edge of PJE connection to pump suction or discharge port.

PJE connector adapter sets consist of two (2) PJE connection adapters, two (2) EPDM O-rings, and two (2) FKM O-rings.

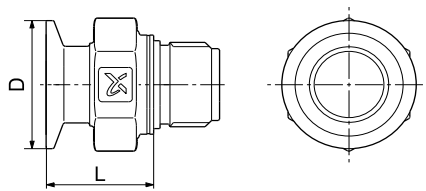

PJE coupling sets for CM(E)

Parts in contact with the pumped liquid are made of stainless steel, EN 1.4401/AISI 316, and rubber.

Coupling and pipe stub	Pump type	Pipe stub	PN	Pipework connection	Rubber parts	Number of coupling sets required	Product number	
	CM(E) 15 CM(E) 25	Threaded	1015 psi (70 bar)	2" NPT	EPDM	2	331301	
					FKM	2	01D00128

Potentiometer for CME

The potentiometer is for setpoint setting and start/stop of the CME pump.

Product	Product number
External potentiometer with cabinet for wall mounting	00625468

CIU communication interface units for CME

GrA 6118

Fig. 34 Grundfos CIU communication interface unit

The CIU units enable communication of operating data, such as measured values and setpoints, between CME pumps and a building management system. The CIU unit incorporates a 24-240 VAC/VDC power supply module and a CIM module. It can either be mounted on a DIN rail or on a wall.

We offer the following CIU units:

CIU 100

For communication via LON.

CIU 150

For communication via PROFIBUS DP.

CIU 200

For communication via Modbus RTU.

CIU 300

For communication via BACnet MS/TP.

Unit type	Fieldbus protocol	Product number
CIU 100	LON	96753735
CIU 150	PROFIBUS DP	96753081
CIU 200	Modbus RTU	96753082
CIU 300	BACnet MS/TP	Contact Grundfos

For further information about data communication via CIU units and fieldbus protocols, see the CIU documentation available in WebCAPS.

R100 remote control

GrA5953

Fig. 35 R100 remote control

Use the R100 for wireless communication with the CME pump. The communication takes place by means of infrared light.

Product	Product number
R100	00625333

Sensors for CME

The sensors must be fitted to the pipework with suitable fittings.

DPI differential-pressure sensor kit	Pressure range		Product number
	[psi]	[bar]	
Kit includes:			
• 1 sensor incl. 3 ft (0.9 m) screened cable (7/16" connections)	0 - 9	0 - 0.6	96611522
• 1 original DPI bracket (for wall mounting)			
• 1 Grundfos bracket (for mounting on motor)	0 - 14.5	0 - 1.0	96611523

MP 204 motor protector

TM03 1471 2205

Fig. 36 MP 204

The MP 204 is an electronic motor protector and data collecting unit. Apart from protecting the motor, it can also send information to a control unit via GENIbus, like for instance:

- trip
- warning
- energy consumption
- input power
- motor temperature.

The MP 204 protects the motor primarily by measuring the motor current by means of a true RMS measurement.

The pump is protected secondarily by measuring the temperature with a Tempcon sensor, a Pt100/Pt1000 sensor and a PTC sensor/thermal switch.

The MP 204 is designed for single- and three-phase motors.

Note: The MP 204 must not be used together with variable frequency drives.

Features

- Phase-sequence monitoring
- indication of current or temperature
- input for PTC sensor/thermal switch
- indication of temperature in °C or °F
- 4-digit, 7-segment display
- setting and status reading with the Grundfos R100 remote control
- setting and status reading via the Grundfos GENIbus fieldbus.

Tripping conditions

- Overload
- underload (dry running)
- temperature
- missing phase
- phase sequence
- overvoltage
- undervoltage
- power factor ($\cos \varphi$)
- current unbalance.

Warnings

- Overload
- underload
- temperature
- overvoltage
- undervoltage
- power factor ($\cos \varphi$)
- run capacitor (single-phase operation)
- starting capacitor (single-phase operation)
- loss of communication in network
- harmonic distortion.

Learning function

- Phase sequence (three-phase operation)
- run capacitor (single-phase operation)
- starting capacitor (single-phase operation)
- identification and measurement of Pt100/Pt1000 sensor circuit.

Description	Product number
MP 204 motor protection	96079927

17. Further product documentation

WebCAPS

WebCAPS is a **Web-based Computer Aided Product Selection** program available on www.grundfos.com.

WebCAPS contains detailed information on more than 220,000 Grundfos products in more than 30 languages.

Information in WebCAPS is divided into six sections:

- Catalog
- Literature
- Service
- Sizing
- Replacement
- CAD drawings.

Catalog

Based on fields of application and pump types, this section contains the following:

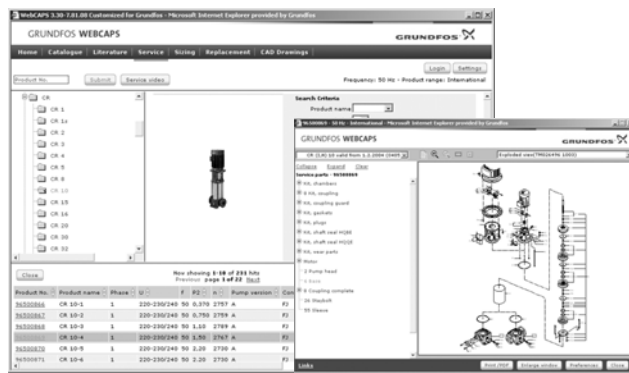

- technical data
- curves (QH, Eta, P1, P2, etc.) which can be adapted to the density and viscosity of the pumped liquid and show the number of pumps in operation
- product photos
- dimensional drawings
- wiring diagrams
- quotation texts, etc.

Literature

This section contains all the latest documents of a given pump, such as

- data booklets
- installation and operating instructions
- service documentation, such as Service kit catalog and Service kit instructions
- quick guides
- product brochures.

Service

This section contains an easy-to-use interactive service catalog. Here you can find and identify service parts of both existing and discontinued Grundfos pumps.

Furthermore, the section contains service videos showing you how to replace service parts.

Sizing

This section is based on different fields of application and installation examples and gives easy step-by-step instructions in how to size a product:

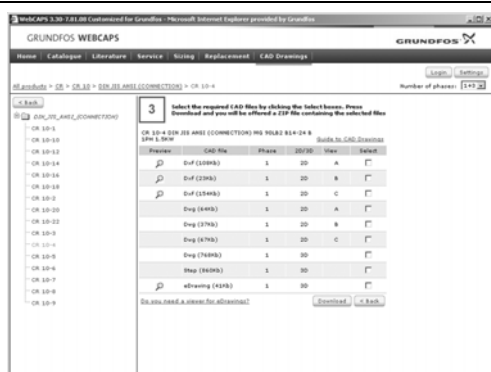

- Select the most suitable and efficient pump for your installation
- Carry out advanced calculations based on energy consumption, payback periods, load profiles, life cycle costs, etc.
- Analyze your selected pump via the built-in life cycle cost tool
- Determine the flow velocity in wastewater applications, etc.

Replacement

In this section you find a guide to selecting and comparing replacement data of an installed pump in order to replace the pump with a more efficient Grundfos pump. The section contains replacement data of a wide range of pumps produced by other manufacturers than Grundfos.

Based on an easy step-by-step guide, you can compare Grundfos pumps with the one you have installed on your site. When you have specified the installed pump, the guide will suggest a number of Grundfos pumps which can improve both comfort and efficiency.

CAD drawings

In this section, it is possible to download 2-dimensional (2D) and 3-dimensional (3D) CAD drawings of most Grundfos pumps.

These formats are available in WebCAPS:

- 2-dimensional drawings:
- .dxf, wireframe drawings
 - .dwg, wireframe drawings.
- 3-dimensional drawings:
- .dwg, wireframe drawings (without surfaces)
 - .stp, solid drawings (with surfaces)
 - .eprt, E-drawings.

WinCAPS

Fig. 37 WinCAPS CD-ROM

WinCAPS is a **Windows-based Computer Aided Product Selection** program containing detailed information on more than 220,000 Grundfos products in more than 30 languages.

The program contains the same features and functions as WebCAPS, but is an ideal solution if no internet connection is available.

WinCAPS is available on CD-ROM and updated once a year.

Subject to alterations.
