Mission

It is our mission — the basis of our existence — to successfully develop, produce and sell high-quality pumps and pumping systems world-wide, contributing to a better quality of life and a healthy environment

Bjerringbro, Denmark

Fresno, California

Olathe, Kansas

Monterrey, Mexico

Allentown, Pennsylvania

Oakville, Ontario

- The world's leading pump company
- World's largest manufacturer of circulator pumps
- World headquarters in Denmark
- North American headquarters in Kansas City - Manufacturing in Fresno, California
- 80 companies in 45 countries
- More than 16 million motors and pumps produced annually worldwide
- North American companies operating in USA, Canada and Mexico
- Continuous reinvestment in growth and development enables the company to **BE** responsible, **THINK** ahead, and **INNOVATE**

¹⁾ CR, CRN 120 and 150 with HQQE shaft seal: -40 °F to +250 °F

²⁾ CR, CRN 120 and 150 with 75 or 100 hp motors with HBQE shaft seal: 0 °F to +250 °F

Applications

The CR, CRN high pressure series is a multi-purpose pump range suitable for a variety of different applications demanding reliable and cost-efficient supply. CR, CRN handles a variety of liquids from potable water to industrial liquids within a very wide temperature, flow and pressure scale. Below is a list representing some general examples of applications requiring a high pressure:

Industry

Pressure boosting

- process water systems
- washing and cleaning systems
- high-pressure washdown systems
- boiler feed and condensate systems

Fig. 1 Industrial application

Water treatment

- Ultra-filtration systems
- Reverse osmosis systems

Fig. 2 Process water treatment

CRNE 1 and 3 HS

Fig. 3 CRNE 3-HS pump

Fig. 4 Sectional drawing of CRNE 1 and 3-HS

Pump

CRNE-HS is a single pump solution capable of generating up to 692 psi.

The CRNE-HS pump is a non self-priming, vertical multistage centrifugal pump fitted with a high speed Grundfos motor with integrated frequency converter, type MLE.

The direction of rotation is the opposite of that of standard pumps, and the chamber stack is turned upside-down, resulting in the pumped liquid flowing in the opposite direction.

This design ensures that the shaft seal is not affected by the pump discharge pressure.

The base, the pump head cover as well as vital pump components are made from stainless steel. The base has in-line suction and discharge ports.

The pump has a maintenance-free mechanical cartridge shaft seal.

Operating conditions

Liquid temperature:	−4°F to +248°F.
Maximum ambient temperature:	+104°F.
Minimum inlet pressure:	29 psi.
Maximum inlet pressure:	218/362 psi. (static/operation).
Maximum operating pressure:	725 psi.

Pump

CRN-SF is a double pump system capable of generating up to 696 psi.

The system consists of two pumps in series. The first pump is a standard pump for feeding. The second pump is a high pressure pump especially designed for high pressures. This data booklet covers technical information about the high pressure pump.

The CRN-SF pump is a non self-priming, vertical multistage centrifugal pump fitted with a Grundfos specified TEFC-motor.

The pump consists of a base and a pump head. The pump body and the outer sleeve are secured between the base and the pump head by means of staybolts.

The direction of rotation is the opposite of that of standard pumps, and the chamber stack is turned upside-down, resulting in the pumped liquid flowing in the opposite direction.

The base, the pump head cover as well as vital pump components are made from stainless steel. The base has in-line suction and discharge ports.

The pump has a maintenance-free mechanical cartridge shaft seal.

Operating conditions

Liquid temperature: -4°F to +248°F.

Maximum ambient temperature: +104°F.

Minimum inlet pressure: 29 psi.

Maximum inlet pressure:

CRN 5SF 218/362 psi.

CRN 10, 15, 20 145/362 psi (static/operation).

Maximum operating pressure: 725 psi.

Pump

CR, CRN is a pump capable of generating up to 568 psi. The pump is a high pressure pump specially designed for high pressures. This product guide covers technical information about the high pressure pump.

The CR, CRN high pressure pump is a non-self-priming, vertical multistage centrifugal pump fitted with a Grundfos specified motor and a specially developed high-pressure shaft seal. When necessary it includes a special pump sleeve and a bearing flange which make the pump capable of handling higher pressures.

CRN

The base, the pump head cover and all components in contact with the pumped liquid are made of stainless steel.

CR

The base and the pump head are made of ductile cast iron.

Operating conditions

Liquid temperature:	-22°F to +248°F.
Maximum ambient temperature:	+104°F.
Maximum inlet pressure:	218 psi.
Maximum operating pressure:	580 psi.

¹⁾ In August 2003 the NEMA version pump code was discontinued for all material numbers created by Grundfos manufacturing companies in North America. The NEMA version pump code will still remain in effect for existing material numbers. NEMA version pumps built in North America after this change will have either an A or U as the pump version code depending on the date the material number was created.

Operating range of the shaft seal for the high pressure pump

The actual operating range of the shaft seal for the high pressure pump depends on operating pressure, type of shaft seal and liquid temperature. The following temperature ranges apply to clean water.

Operating conditions of the shaft seal for the CR high pressure pump

Shaft seal	Description	Max. temp. range [°F]
HQQE	O-ring (cartridge) (balanced seal), SiC/SiC, EPDM	-22 to +248
HQQV	O-ring (cartridge) (balanced seal), SiC/SiC, FKM	-4 to +194
HUBE	O-ring (cartridge) (balanced seal), TC/carbon, EPDM	+32 to +248
HUBV	O-ring (cartridge) (balanced seal), TC/carbon, FKM	+32 to +194

Pumped liquids

Thin, non-explosive liquids, not containing solid particles or fibers. The liquid must not chemically attack the pump materials.

When pumping liquids with a density and/or viscosity higher than that of water, oversized motors must be used, if required.

Whether a pump is suitable for a particular liquid depends on a number of factors of which the most important are the chloride content, pH value, temperature and content of chemicals, oils, etc.

Please note that aggressive liquids (e.g. sea water and some acids) may attack or dissolve the protective oxide film of the stainless steel and thus cause corrosion.

Performance curves

The guidelines below apply to the curves shown on the following pages:

1. The motors used for the measurements are standard TEFC or MLE motors.
2. Measurements have been made with airless water at a temperature of 68°F.
3. The curves apply to a kinematic viscosity of $\nu = 1 \text{ cSt}$ ($1 \text{ mm}^2/\text{s}$).
4. Due to the risk of overheating, the pumps should **not** be used at a flow below the minimum flow rate.

The curve below shows the minimum flow rate as a percentage of the nominal flow rate in relation to the liquid temperature.

Fig. 13 Minimum flow rate

TM03 2912 5105

Selection of CR, CRN high pressure pumps

Pump size

Selection of pump size should be based on:

- Required flow and pressure at the point of use.
- Pressure loss as a result of height differences.
- Friction loss in the pipework.
It may be necessary to account for pressure loss in connection with long pipes, bends or valves, etc.
- Best efficiency at the estimated duty point.

Efficiency

If the pump is expected always to operate at the same duty point, select a pump which is operating at a duty point corresponding with the best efficiency of the pump.

In case of varying consumption, select a pump which best efficiency falls within the duty range representing the highest power consumption, i.e. typically the duty range covering the greater part of the duty time.

Fig. 14 Dimensional data

TM02 6711 1403

TM02 8316 2406

Fig. 15 Example of a duty point

Shaft seal

As standard, the CR, CRN high pressure range is fitted with a high pressure cartridge shaft seal suitable for the most common high pressure applications.

The following three key parameters must be taken into account, when selecting the shaft seal:

- type of pumped liquid and
- liquid temperature.

Grundfos offers a wide range of shaft seal variants to meet specific demands.

Inlet pressure and operating pressure

The limit values stated on pages 5-7 must not be exceeded as regards

- minimum inlet pressure
- maximum inlet pressure
- maximum operating pressure.

Fig. 16 Shaft seal (Cartridge type)

TM02 0538 4800

Fig. 17 Inlet and operating pressure

TM02 1204 0601

Examples of operating and inlet pressures.

The values for the operating and inlet pressures shown in the tables must not be considered individually but must always be compared, see the following examples:

Example 1:

The following pumps in series are selected.

First stage pump CRN 5-24
Second stage pump CRN 5-24SF

	CRN 5-24	CRN 5-24SF
Maximum operating pressure	362 psi	725 psi
Maximum inlet operating pressure	218 psi	362 psi

The pump discharge pressure against a closed valve for a CRN 5-24 is 338 psi.

The first stage pump is not allowed to operate at an inlet pressure of 218 psi. The maximum inlet pressure of the the first stage pump is $362 - 338 = 24$ psi.

Example 2:

The following pumps in series are selected.

First stage pump CRN32-3
Second stage pump CRN32-10

	CRN 32-3	CRN 32-10
Maximum operating pressure	232 psi	580 psi
Maximum inlet operating pressure	145 psi	218 psi

The pump discharge pressure against a closed valve for the two pumps in series is 519 psi.

The first stage pump is not allowed to operate at an inlet pressure of 145 psi. The maximum inlet pressure of the the first stage pump is $580 - 519 = 61$ psi.

Baldor motor

GR 7845

All motors are TEFC (Totally Enclosed Fan Cooled, constant speed).

The motors are recognized under the component recognition program of the Underwriters Laboratories Inc. for the United States and Canada.

Motors for CRN-SF 5, 10, 15 and 20 high pressure pumps

HP	Ph	Frame	S.F.	Voltage [V]	Insul. class	Full load current [A]	Service factor current [A]	Motor type
10	3	132SB	1.0	480	F	12.0	13.2	MG
15	3	160MB	1.0	480	F	17.2	19.0	MG

25	3	160LB	1.0	480	F	28.0	31.0	MG

GR 7845

All motors are IP 55 (similar to TEFC wash-down duty).

The motor service factor is 1.0.

Motors for horizontally mounted CR(N) 32 pumps

TM03 1712 2805

Note: MTR Eff. Is the total efficiency for the motor and variable frequency drive.

All motors are IP 55 (similar to TEFC wash-down duty).

The MLE motors are recognized under the component recognition program of the Underwriters Laboratories Inc. for the United States and Canada.

Pipework connection

For pipework connection, various sets of counter flanges and couplings are available.

CR, CRN counter flanges

Counter flanges for CR, CRN pumps are made of stainless steel according to AISI 316.

A set consists of two counter flanges, two gaskets, bolts and nuts.

		TM02 5693 + 5694 3802	CR 32 CRN 32	Threaded	ANSI 150 lb.	2½" NPT	91121951

				Threaded	ANSI 300 lb.	5" NPT	91121959

Adapter kit

6" flanges are available for CR, CRN 120 and 150 pumps. To use 6" flanges, two adapter kits must be ordered per pump.

Adapter kit	Pump type	Pipe connection	Number of flange kits needed	Product number
	CR 120 CR 150	6" RF 250 lb. Ductile iron	2	96638184
	CRN 120 CRN 150	6" RF 300 lb. ANSI 316 SS	2	96638186

Victaulic® type couplings with pipe stub

Couplings for CRN pumps are made of stainless steel according to AISI 316 (EN 1.4401).

A coupling set consists of a victaulic type coupling (style 77), rubber bushing, pipe stub, bolts and nuts. The number of sets needed for a complete pump is stated in fig. 18.

Coupling sets	Pump type	Pipe stub	Rated pressure	Pipework connection	Rubber parts	Number of coupling sets needed	Product number

Pressure sensor for CRNE-HS

Pump type	Pressure range	Product number
CRNE 1, 3 HS	0-870 psi	91136174

Pressure sensor include a 6 ft cable.

A priming valve with hollow stem is required when ordering a pressure sensor (product number 96527050).

LiqTec™

A dry-running protection device. The Grundfos LiqTec stops the pump immediately

- if there is no liquid in the pump (dry-running)
- if the liquid temperature exceeds 266°F ±9°F.

When connected to the PTC sensors in the motor, the LiqTec also protects the motor against overheating.

LiqTec is prepared for DIN rail mounting in a control cabinet.

Enclosure class: IP X0.

WebCAPS

WebCAPS is a **Web**-based **C**omputer **A**ided **P**roduct **S**election program available on www.grundfos.com.

WebCAPS contains detailed information on more than 185,000 Grundfos products in more than 22 languages.

In WebCAPS, all information is divided into 6 sections:

- Catalog
- Literature
- Service
- Sizing
- Replacement
- CAD drawings.

Catalog

This section is based on fields of application and pump types, and contains

- technical data
- curves (QH, Eta, P1, P2, etc) which can be adapted to the density and viscosity of the pumped liquid and show the number of pumps in operation
- product photos
- dimensional drawings
- wiring diagrams
- quotation texts, etc.

Literature

In this section you can access all the latest documents of a given pump, such as

- data booklets
- installation and operating instructions
- service documentation, such as Service kit catalog and Service kit instructions
- quick guides
- product brochures, etc.

Service

This section contains an easy-to-use interactive service catalogue. Here you can find and identify service parts of both existing and discontinued Grundfos pumps.

Furthermore, this section contains service videos showing you how to replace service parts.

Sizing

This section is based on different fields of application and installation examples, and gives easy step-by-step instructions in how to

- select the most suitable and efficient pump for your installation
- carry out advanced calculations based on energy consumption, payback periods, load profiles, life cycle costs, etc.
- analyse your selected pump via the built-in life cycle cost tool
- determine the flow velocity in wastewater applications, etc.
