WELCOME TO GRANBY COMPOSITES

WHERE INNOVATION MEETS RELIABILITY

Granby Composites manufactures aboveground and underground premium-grade fiberglass tanks. By choosing Granby Composites, you choose peace of mind. The proven, unmatched longevity of our tanks paired with minimal maintenance ensures your investment is worthwhile for decades.

We offer customizable tank and pumping vault designs with specialized offerings and match our client's requirements by leveraging state-of-the-art equipment and expertise:

- Diameters ranging from 6, 8, or 10 feet
- Capacities ranging from 2,000-42,000 gallons (7,000-157,000 liters)
- Lightweight, anti-corrosion and turnkey solutions for easy installation and use

At Granby Composites, excellence is not just a goal - it's an expectation. Count on us for unparalleled engineering services, functionality, and durability for all your fiberglass water tank storage needs.

Wastewater Storage Tanks

Granby's underground fiberglass water tanks serve as reservoirs for storing wastewater generated from residential, commercial, or industrial facilities. These tanks are designed to hold a significant volume of wastewater until it can be safely treated or removed.

Drinking Water Storage Tanks

The quality and safety of our products are at the core of our manufacturing process.

Our fiberglass tanks for drinking water storage adhere to the most stringent global standards and are produced following rigorous manufacturing processes and quality controls. The tanks are inert and do not leach chemicals into the stored water, ensuring high water quality.

Rainwater Collection Tanks

Fiberglass water tanks from Granby Composites can be designed in various sizes to fit the specific needs of the rainwater recuperation system. They can be installed above ground or underground, depending on space availability and design requirements.

Grease Interceptors

We're proud to offer grease interceptors for agro-industry as well as commercial kitchens and food service establishments. Our fiberglass tanks capture and contain fats, oils, and grease from wastewater before it enters the municipal water system.

THE ADVANTAGES OF TAILOR-MADE FIBERGLASS TANKS FOR VARIOUS APPLICATIONS

Granby Composites manufactures a wide range of fiberglass tanks and accessories, custom-designed to meet specific needs.

Durable & Adaptable

Our fiberglass water tanks provide lasting performance and minimal maintenance. These tanks are sized and built to accommodate a variety of applications. There is no limit to the water storage capacity: Granby Composites fiberglass tanks have the advantage of being able to be installed as communicating vessels.

Lightweight

Granby Composites fiberglass water tanks are designed to be effortlessly transported, handled, and installed with easy loading and unloading.

Watertight

The combination of fiberglass and high-quality resin ensures exceptional watertightness, reducing the risk of leaks and environmental contamination. Trust in our expertise to safeguard your project's integrity and environmental sustainability.

Custom-Made

Our dedicated team collaborates closely with our customers and their engineers from start to finish. We also partner with leading water treatment firms to seamlessly install equipment according to project specifications.

GRANBY COMPOSITES: YOUR TRUSTED PARTNER FOR HIGH-CAPACITY STORAGE TANKS ACROSS NORTH AMERICA

Trust our experts for the engineering, conception and fabrication of high-capacity storage tanks in North America. Granby Composites manufactures fiberglass tanks for a variety of uses, including fire protection tanks, wastewater tanks, septic tanks, drinking water tanks, rainwater tanks, and more.

Fire Protection Tanks

Our fiberglass water tanks play a crucial role in providing reliable and efficient water storage for fire protection systems, which is critical in the event of a fire.

These tanks serve as a backup water supply for firefighting in areas where municipal water systems may be insufficient. Water stored in these tanks can also be connected to fire sprinkler systems.

Granby Composites also manufactures pumping vaults which are often installed below ground level, adjacent to buildings or facilities requiring fire protection, to ensure quick access for firefighters during emergencies.
